It works by forming a thin layer over the surface of your water - this reduces the rate of evaporation and can save water at a rate of up to 50%.

WaterGuard is probably the most effective and economical solution to reducing water evaporation in dams, ponds, reservoirs and more.

This super-effective product is made up of polymers that repel each other when in water. This results in an automatic spreading of the solution across the entire water’s surface. This forms a thin (but powerful) barrier that prevents the excess evaporation of water.

**SAFE FOR**
Drinking Water, Swimming, Irrigation, Stock, Fish & Aquatic Plants.

**BUY NOW**

**WATERGUARD**
- Prevents excess water loss
- Polishes water surface
- Safe to use – NSF International Certified
- Easy to apply

Evaporation is a common cause for water loss in pools, lagoons, lakes and more and is often difficult to control.

**HOW FAST DOES WATER EVAPORATE?**

Each square meter of water surface can lose **up to 8 litres every day**, in warm conditions. Independent trials of Aquatain have shown the product to decrease this evaporation by up to 50% - that’s a lot of water saved even in the short-term.

---

**WaterGuard when initially applied**

**WaterGuard as it spreads over the water’s surface gradually.**

<tbody>
<tr>
<td>Pools, Dams and Reservoirs</td>
<td>1L per 1,000m² of water surface area OR 10L per hectare of surface area.</td>
<td>Simply pour directly from the container into the water body to be treated. For larger applications, it can also be applied by air.</td>
<td>Every 3 weeks during the warmer months.</td>
</tr>
</tbody>
</table>

**For Best Results:**

Shake container vigorously before use. Apply on the upwind side of the water body to assist with spreading. Apply every 3 weeks during the warmer months to minimise evaporation.
