

AQUATIC TECHNOLOGIES

The Water Treatment Experts

PRODUCT: **WATERGUARD**

TARGET: **EVAPORATION**

Prevent water loss

Easy to apply

Safe to use

*It works by forming a thin layer over the surface of your water - this reduces the rate of evaporation and can save water at a rate of up to 50%.*

WaterGuard is probably the most effective and economical solution to reducing water evaporation in dams, ponds, reservoirs and more.

This super-effective product is made up of polymers that repel each other when in water. This results in an automatic spreading of the solution across the entire water's surface. This forms a thin (but powerful) barrier that prevents the excess evaporation of water.

## WATERGUARD

- Prevents excess water loss
- Polishes water surface
- Safe to use – NSF International Certified
- Easy to apply

### SAFE FOR

Drinking Water, Swimming, Irrigation, Stock, Fish & Aquatic Plants.

Evaporation is a common cause for water loss in pools, lagoons, lakes and more and is often difficult to control.

## HOW FAST DOES WATER EVAPORATE?

Each square meter of water surface can lose **up to 8 litres every day**, in warm conditions. Independent trials of Aquatic have shown the product to decrease this evaporation by up to 50% - that's a lot of water saved even in the short-term.

WaterGuard when initially applied

WaterGuard as it spreads over the water's surface gradually.

The Water Treatment Experts

## WaterGuard

## Application Rates:

Where To Use	How Much To Use	How To Apply	When To Use
<b>Pools, Dams and Reservoirs</b>	1L per 1,000m <sup>2</sup> of water surface area <b>OR</b> 10L per hectare of surface area.	Simply pour directly from the container into the water body to be treated.  For larger applications, it can also be applied by air.	Every 3 weeks during the warmer months.

### For Best Results:

- Shake container vigorously before use.
- Apply on the upwind side of the water body to assist with spreading.
- Apply every 3 weeks during the warmer months to minimise evaporation.
