Perfect for ponds, dams and lakes, this handy skimmer clears a path by skimming free-floating surface weeds and vegetation.

## DUCKWEED SKIMMER

The physical removal of free floating aquatic weeds has several advantages particularly when infestations are advanced. Partial physical removal increases the effectiveness of spray applications with Orange Oil, by creating free water to assist the weeds in sinking, reduce the amount of spray being applied and speed up the overall treatment process. Partial physical removal or bulk physical removal takes out the nutrient loading held within the free floating aquatic weeds. Once the body of water has been cleared, applications such as Surface Clear can help reduce the likelihood of re-establishment of new free-floating weeds.

The Free Floating Duckweed Parachute Skimmer is specifically designed to make the job of physically removing Duckweed quick and easy. Safe and simple to use, the skimmer reduces the OH&S risks with its easy action to capture free floating aquatic weeds and remove them from the water.

Each sweep, captures a path using a tailored screen mesh and as the skimmer is removed from the water it closes and traps the catch, for easy disposal onto the shore line or into a wheelbarrow or trailer.

**The Free Floating Duckweed Parachute Skimmer is available in two sizes:**

- 95cm - ideal for ponds and dams
- 1.52m - ideal for larger water bodies

*Easy to pull through the water.*

*Use in conjunction with our Orange Oil solution.*
