PRODUCT: **PHOSFIXX POOL**

TARGET: **PHOSPHATES IN SWIMMING POOLS**

PhosFixx Pool is a state of the art chemical-free phosphate remover designed to be your first line of defence against algae growth.

Situations where to use PhosFixx Pool

PhosFixx Pool was especially designed with the pool owner in mind, and is easy to use and fast-acting. PhosFixx Pool comes in small pouches that you place directly in your pool's skimmer box; an out of sight and quick solution. This means you spend less time worrying about pool maintenance and spend more time enjoying your sparkly clean pool.

Where does phosphates come from?

Phosphates accumulate in water from rain, dust, floods, leaves, fertiliser, pets, and swimmers. Other sources can include detergents, insecticides, roof water, swimming wildlife, and even some pool chemicals. All these nutrient rich phosphates are an ample food source for algae in your swimming pool. As little as 0.2ppm of phosphate can result in algae outbreaks that make your pool water unhealthy. Stop stubborn algae directly at the source by using Phosfixx Pool to tackle whatever life throws in your pool.

PhosFixx Pool is able to remove 0.2mg/L of Phosphates from water. This is equivalent to removing 4x the maximum recommended amount of Phosphates in water.

The contents of the PhosFixx Pool pouch are biodegradable and are ideal for dispersal in composting or green waste.

Algae feeds on phosphates in you pool, and by using PhosFixx Pool to maintain low phosphate levels you're essentially starving them out before they can become a nuisance, all without the use of pesky chemicals and in just 5-10 days.

Benefits

- Chemical-free
- Removes phosphates from pool water
- Eliminates food source of algae to minimise algae growth
- Fast-acting in only 5-10 days
- Easy to use and simple instructions – just place directly in your skimmer box
- Ideal for most swimming pool types, including concrete, tiled, fibreglass and vinyl.
- Non-toxic and biodegradable when discarded
